

L^AT_EX R and Python examples

A toy example with Python: A string from Python!

```
print(my_string)
```

A string from Python!

Did you know that $2^{65} = 36893488147419103232$?

An example with R:

```
[1] "hello world"
```

```
hello = 'hello world'  
print(hello)
```

One line to make changes

```
hello = 'hello world'  
print(hello)
```
